SCAFFOLDINGS MADE IN PLETTENBERG

MJ-Gerüst GmbH, based in Plettenberg in the German region of Sauerland, is part of a strong group of companies, which can look back on more than 50 years of company history. The core competence of the family company lies in the production and worldwide distribution of high-quality steel and aluminum scaffolding systems, which offer almost limitless possibilities in the field of modern system scaffolding construction.

With a unique range of products and a wide range of universal accessories, we offer our customers the option of completing existing scaffolding material in a system-compatible complement. A highly valued advantage by our customers that has given our scaffolding international recognition and prominence.

Development, production and sales. These are the cornerstones of our range of services, which are supplemented by numerous additional services. Especially our support in the planning and implementation of difficult projects is claimed. A service in which our technical know-how and experience can often contribute to considerable time and cost savings.

Only through qualified work can a safe quality product be created. Our proven quality management reflects our knowledge and experience and makes the quality of our products measurable. In order to guarantee our high quality standards, our production processes are constantly accompanied by external examination offices and engineers.

OUR COMPANY - YOUR BENEFITS

- Production in Germany at the location Plettenberg
- System compatible, high quality and norm compliant scaffold systems
- Certifications according to DIN EN 9001, 14001 and 50001
- Highest product quality through dynamic quality management
- Short-term availability of material due to high storage capacities and short decision-making processes
- Use of the modern production technology and permanent optimization of technological production running
- Project support already in the planning phase

PARTNER AND CERTIFICATES

THE ORIGINAL MJ OPTIMA PRINCIPLE

The MJ OPTIMA scaffolding system is designed as a facade scaffolding system. The advantages from the tried and tested frame system are taken up and combined with the advantages of a modular designed scaffolding system. In addition, the requirements of a leading railing are met with system-integrated components. Meaningful and well thought out System-free accessories complete the MJ OPTIMA principle.

By investing in the MJ OPTIMA system, you are OPTIMAlly aligning your scaffold company with the future requirements of the construction industry and occupational health and safety legislation.

MJ OPTIMA

The MJ OPTIMA metric system uses new types of vertical standards and deck ledgers. Tried and tested scaffold decks, diagonals, accessories and many side protection parts can still be used. The proven and internalized assembly activities are not significantly influenced.

The use of the known perforated disc as a modular scaffolding node also makes it possible to use round tube decks and other modular scaffold components. The connection with the modular scaffold system allows previously unknown degrees of freedom in the execution of unusual scaffolding.

By installing decking ledgers, optionally with two or three piles in width, the use and provision of vertical frames of different widths is no longer necessary. Well thought-out details, such as the scaffolding corner with only three scaffolding standards, complete the superior efficiency of the system.

Transport, storage and movement of the components on the construction site are considerably simplified. Through the mechanically transport in palletized units with forklifts or by crane, in most applications only the so-called "last meter" remains for manual handling and not much more.

The lower component weights in connection with the higher safety against falling lead to a far reduced body stress strain and thus to a higher hourly output on the construction site.

The integrated leading railing frees you from the obligation to use personal protective equipment (PPE) in most situations.

The approval of the scaffold system by the German Institute for Structural Engineering with the approval number Z-8.22-986 enables a very wide field of application without further individual evidence: the standard design as well as diverse, standardized scaffold configurations with a static verification through the manufacturer and associated planning engineers are available and often replace evidence in individual cases.

In applications with special requirements that go far beyond the norm, the stability can be checked in individual cases with a static proof.

The leading railing with system-integrated components can be implemented with the existing vertical standards. The MJ-Bärchen railings (protected by proprietary rights) enable a further increase in efficiency and occupational safety.

EFFICIENT due to optimized ease of assembly

PROFITABLE through long life and excellent value retention

FLEXIBLE through countless field lengths/widths

VERSATILE through extensive range of accessories

TRBS-COMPLIANT RAILING ASSEMBLY

After completing all the assembly work for a scafoold level, the scaffold builder moves up to the next scaffold level. There is already a leading one there principal guardrail 1.00 m above the scaffold deck. The side protection of the scaffold decks is completed with a knee rail and toe board. The leading guardrail for the next scaffold level is installed as shown in Figures 1-4 below:

- A railing post 2.00 m is is going to get up on one tube connector attached.
- With the top Load classivel pin at +3.00 m, a back guard rail coupled.

- Another railing is with the standing up coupled railing post.
- Another handrail 2.00 m is becomes is connected to the free railing end coupled and clipped on.
- Field by field, all leading guard rails are mounted in advance.

- The lower, free end of the railing is attached to the upper tilting pin coupled with a second handrail 2.00 m.
- The hand rail is connected becomes to the coupled railing coupled attached to the next upright tube connector.

 The scaffold decks are laid around the work complete this scaffold level.

When climbing to the next scaffold level, there is already protection against falling. The outside of the scaffold is continuously secured with a leading guard rail 1.00 m above the scaffold decks and with double guard rails on the front sides of the scaffold.

Gen. approved by building inspection. For details on type and scope, please refer to the approval model: Z-8:22-986.

This price list includes the standard components for the MJ OPTIMA scaffold system. All components for creating the standard version of the approval as well as some additional components are included in this price list. The MJ OPTIMA scaffold system can be usefully completed with components from the MJ UNI 70/100 facade scaffold system, the MJ COMBI metric modular scaffold system and non-system scaffold accessories. The price lists for these additional systems contain a large number of components for special problem solutions. If in doubt or if you have any further questions, please contact our emplyees. We are happy to help!

All prices exclude VAT applicable at the time of shipment. All dimensions and weights are non-binding approximate values. Technical data is subject to change without prior notice. Prices are charged as applicable on the day of shipment. Sale is subject exclusively to our sales terms and delivery conditions. An excerpt: place of business and jurisdiction is Plettenberg. Extended retention of title until full payment of all outstanding claims. Our prices are exworks.

BASE JACK

- Steel, hot dip galvanized
- With tube spindle
- Base plate 150 x 150 mm
- For adjusting level with differences in height of the underground
- Knurled nut with collar for centring the shaft on the spindle
- Lock to prevent unscrewing of the knurled nut and to ensure the necessary bridging length
- Can be used as a head spindle

ALUMINUM DECK WITH STEEL CAPS - UC

- Non-slip surface and easy to stack
- Optimized ratio of weight and carrying through computerassisted profile optimization
- Steel caps therefore robust and durable
- Patented beam reinforcements in the walking area ensure minimal deflection and best possible slip resistance

ALUMINUM STAIRS WITH PLATFORM

- For bay height 2.00 m
- Scaffold stairway for the planned construction with facade scaffold
- For quick and safe mounting of the levels
- The steps are designed in a non-slip manner and allow comfortable outside access for extensive use of scaffold and when transporting material, without reducing the work surface in the main walkway
- Evenly distributed line load p=2.5 kN/m2
- Single load distributed on 0.2 x 0.2 m2 F=1.5 kN
- Meets the requirements according to DIN EN 12811-1

TUBE CONNECTOR FOR LATTICE BEAMS

- Steel, hot dip galvanized
- For the continuous extentions of lattice beams

Model	Weight (kg)	Article no.	Price (€)
Straight	1,30	003588	30,50

BOLT WITH CUTTER PIN

- Screw-free connection of lattice beams
- Replaces usual screws M 12 x 60 mm there by reducing the assembly time
- Consisting of cotter pin (article no. 002232), bolt (article no. 002235) and washer (article no. 002964)
- All articles are also available separately

The system free safety enclosure OPTI-BOARD is the answer to many questions that you may ask yourself when planning your construction site with regard to environmental and noise protection. When renovating or building a new building, the construction site enclosure protects employees and passers by from noise, dust and dirt.

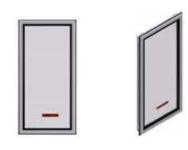

- Light cassette: The transparent version of the OPTI-BOARD enables work in daylight conditions.
- Dust-tight: A circumferential rubber seal makes the OPTI-BOARD almost dust-tight. This enables a clean construction site cladding, the use of vacuum systems (asbestos removal) and weather-independent sandblasting.
- Quick and easy assembly
- Can be use in the UNI, UNI-CONNECT, UNI TOP, COMBI and OPTIMA systems
- Can be installed vertically and horizontally

STACKING PALLET FOR TUBES

- Steel tube, hot dip galvanized
- Specially suited for module scaffolds, e. g. standards, ledgers, guard rails, diagonal braces, tubes and toe boards
- Open all round
- Suited for stacked and crane transports
- The tubular supports are removable and are to be stowed securely in the base frame so that empty pallets can be transported and stacked in a very space-saving manner
- Special orders on request
- Push-on tube with bevel on one side, also available separately (Article no. 005791)
